Modules

[os](#)   [shutil](#)

Functions

      lastVersion(verID)
          Returns the path to the directory where the verID version of the model is located

          If a value of -1 is provided, analyzes the "version0000" directories and returns the last one

      nextVersion()
          Returns the path to the directory where the verID version of the model is located

          If a value of -1 is provided, analyzes the "version0000" directories and returns the last one

      removefile(file)
          Removes silently files or whole paths.

          It checks the existence of the file in the argument and if it does not exists do not issue any error

      splitSDF(molecules)
          Splits a SDFile containing 1 to n molecules

          Every molecule is written to a ""m0000000001.sdf"" file and the full list of names is returned in a list

      writeError(error)
          Print an error message

Data

      opt = '/home/mpastor/soft/eTAM/opt/'
      wkd = '/home/mpastor/soft/eTAM/src'
